The document considered to represent the nearest prior art, the document GB-A-2083370 describes a device for separating immiscible liquids by coalescing comprising a plurality of coalescing elements provided with flow direction changing means. Even if the main novel feature of independent claims 1 and 21, the arrangement of the coalescing elements within a single chamber is known from the document WO-A-0220115, a combination is considered as non-obvious, since the GB-A-2083370 attempts to provide small-sized equipment and teaches complex geometrical patterns. Thus independent claims 1 and 21 as non-obvious alternatives fulfill the requirements of Article 33(2) and 33(3) PCT. The same argumentation is valid for independent claim 47 defining a device with a specific coalescing media. The industrial applicability is evident (Article 33(4) PCT).
